

CODE 5070-2 / F245070-B (STAGE BLACK)

The Selflock Hook is a clever combination of C-clamp and half-coupler and is ideal for securing heavy devices. The Selflock Hook is easy to hang and guarantees a certain level of drop safety, even when the clamp is still open, making it easy for someone working alone. It was specially developed for truss with 32-35mm main chords.
